**LESTER**  
BUILDINGS

# DEPENDABLE PERFORMANCE SINCE 1947

Lester Buildings is a leading national post-frame building company, founded on integrity in its engineering and manufacturing standards, and the way it does business. This, in large part, explains why Lester is an enduring fixture on the American landscape. Lester's capabilities have evolved from simple buildings to multi-use, multi-acre complexes.

Over 170,000 installed buildings provide solid physical evidence of this legacy. It's what satisfied customers have to say, however, that counts most. In survey after survey, it's clear that Lester building owners appreciate a company committed to quality, flexibility and a superior building buying experience.

## Confident Building Decisions

When considering a post-frame structure, today's buyer has many options. We know how stressful it can be. If you want to feel confident about your decision after you've made it, then we invite you to consider a Lester.

Lester Buildings feature a crisp, trimmed-out curb appeal. But the real benefits of a Lester are found in the framework. This is where you can see long-standing features that, without question, reflect our concern for structural integrity.

Whatever your needs might be, from basic cold storage to an elaborate multi-acre facility with all the bells and whistles, your Lester dealer/representative will help you determine the most flexible, economical solution designed just for you!

*"Since I have been farming, I have always dreamed of owning my own farm shop. As my business expanded, I realized that I needed more than just a farm shop; I needed a place I could also house my growing cattle order buying business. MY DREAMS CAME TRUE as we designed and built a multi-purpose facility complete with a shop, office, and conference room. The people at Lester Buildings were very helpful in planning and completing a farm shop to MEET MY UNIQUE NEEDS. I would like to thank Lester Buildings and our local Lester dealer for their hard work, EXPERTISE and detail in design."*

## OPTIONS THAT ADD VALUE TO YOUR DESIGN

Project 118317

An attached office gets you closer to the action and integrates your entire operation to run more efficiently.

Project 510498

Add connected living spaces like kitchens, restrooms, bedrooms and even entertainment rooms to make your work space comfortable and convenient.

Project 511480

As operations expand, your staff and visitors will benefit from a dedicated, professional conference room.

*"We were looking for a building that provided **STRUCTURAL INTEGRITY** and first class energy concepts but didn't sacrifice curb appeal. We looked at several other building manufacturers, but always came back to Lester Buildings. We are **VERY HAPPY** with our Lester Building and could not be more satisfied with the overall energy efficiency of the product."*

— KIM P.  
BERESFORD, SD

Project 212991

*"When I decided to build my storage barn, it was only after extensive comparative shopping. Once I was convinced of the quality of Lester's materials, I had the pleasure of working with the Lester representative, who helped me with various options and provided practical suggestions I had not considered. Once construction began, I quickly saw why Lester and their customers were so PROUD of their buildings. I could not be more pleased with my experience with Lester Buildings and my new building is the ENVY OF THE NEIGHBORHOOD."*

# INSULATED SHOPS FOR YEAR-ROUND COMFORT

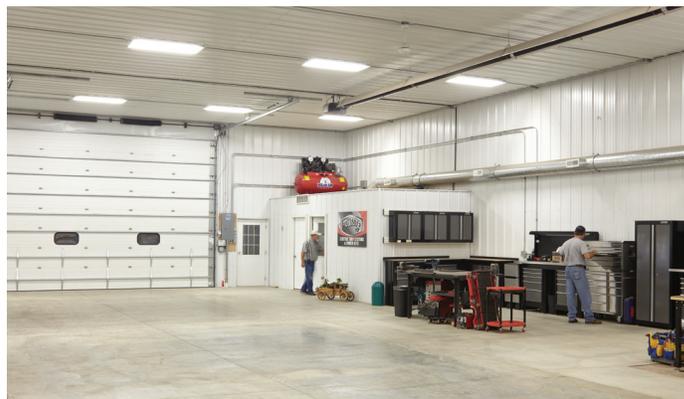

A comfortable, spacious and well-lit workshop can be the very heart of your operation, especially on those snowy or rainy days!

For shop buildings that provide the best in year-round productivity, consider finishing the interior with Lester's energy-efficient lined-and-insulated system. It is framed with horizontal wall girts that run between wall columns. The wall cavity is filled with fiberglass insulation, while blown-in cellulose or fiberglass is used on ceilings. White Uni-Rib® steel liner is fastened to the wall girts and creates a bright working environment.

In manufacturing shops and vehicle maintenance areas where loud machinery is used, Lester's Acoustical Liner Panel System can reduce noise levels. The steel panel is perforated. The insulation and vapor barrier behind the panel absorbs eight times more sound energy than a standard liner system. Typically the acoustical panel is installed on the ceiling and the upper 1/4 to 1/2 of the walls.

Lester's lined-and-insulated shop buildings protect you and your investments from nature's harsh extremes.
